

Logan International Airport

Welcome to Logan's International Gateway.

Our new departure concourse combines good looks and stunning views of Boston with functional features to enhance passenger comfort and convenience. Nearly twice the space. 100% bag screening. Quicker, more efficient check-ins with four times the positions, using the latest technology. At Logan's International Gateway, style and substance are one.

A New International Gateway

- The new terminal is almost twice as big as the old one with the addition of 400,000 square feet for passenger convenience and comfort.
- The new addition, if stood up on end, would reach 682 feet into the air – almost as high as the Prudential Tower.
- The combined square footage of the exterior glass, including skylights, is 121,000 square feet – enough glass for 2,881 pairs of sliding glass patio doors.
- The air conditioning system could provide cool air for 350 average houses with central air conditioning or 16,000 window air conditioners.
- All the lighting is routed through 39 lighting control panels, and is controlled by a central processor.
- The lighting fixtures require 753,520 watts, enough wattage to light 380 three-bedroom houses.
- All of the wires and cables (power, communications, fire alarm, etc), end-to-end, would be enough to circle the globe at the Equator more than twice.
- The baggage conveyor belts, if laid out straight, would be twice as long as the Ted Williams Tunnel.
- There are 96 common-use check-in counters at the new concourse, almost double the previous amount.
- The front of the terminal features 1.1 miles of roadway for passenger pick-up and drop off and a separate curb area for taxis.
- 27,500 cubic yards of concrete were poured for the project, which is enough concrete to build a six-foot wide sidewalk from East Boston to Sturbridge, MA.
- There are 7,400 tons of structural steel – enough to build almost 5,000 mid-size automobiles.
- In 2002, Logan handled 3.9 million international passengers on more than 45,000 flights.
